 - Seat of Dioceses

The bearings and distances for the public surveys have been computed from the original land grant and plat maps. The bearings were taken from the meridian, and the distances from the point of beginning, which is the point of intersection of the meridian with the line of the survey. The bearings and distances are computed by an ordinary method, and are not corrected for the curvature of the earth. The bearings and distances are computed by an ordinary method, and are not corrected for the curvature of the earth. The bearings and distances are computed by an ordinary method, and are not corrected for the curvature of the earth.

H. Wilson
